## Safety Guidance Area

Affinity stress-relief  
consultation window.

## Medical Information Desk

"The Guidance Desk, also known as the Directional Assistance Desk or Inquiry Desk, primarily serves as a workstation to guide patients to the relevant departments for medical care. It provides consultation and direction for patients and represents the face of the hospital, symbolizing the hospital's comprehensive capabilities."

## Nurse Station

"The Nurse Station is where nurses perform their duties. At this location, they convey and carry out doctors' orders, monitor and document patients' progress, handle patients' emergency calls, regulate unauthorized personnel, and accommodate visitors."

## Triage Desk

"The Triage Desk is a service station established at the entrance of each outpatient department. Its primary functions include managing queues, handling ticketing, and addressing doctor-related inquiries. At some desks, nurses assist doctors with auxiliary treatments and handle preparatory procedures prior to examinations."

## Information Desk

### Product Specifications

Gain a more intuitive understanding of the Information Desk products.

**Elevated Reception Desk**  
Strategically designed to ensure the privacy of medical staff while optimizing form and documentation processing.

**Streamlined Communication Desk**  
Crafted for unhindered, face-to-face interactions, underlining the ethos of equitable patient-medical staff communication.

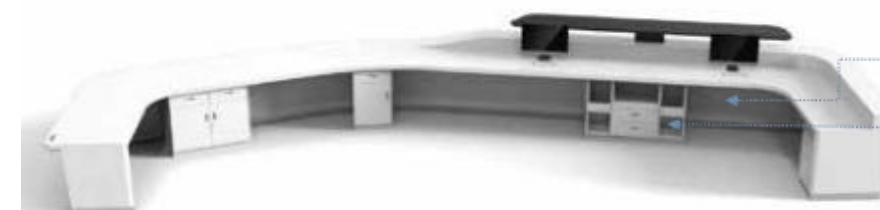

**Integrated Wheelchair Accessibility**  
A testament to Aurora Group's commitment to inclusivity, catering to the needs of wheelchair-bound visitors.

**Safety-Centric Broad Curved Design**  
A hallmark design ensuring utmost safety and fostering a sense of trust between healthcare providers and patients.

**Premium Stainless Steel Baseboard**  
Synonymous with the Aurora Group's dedication to aesthetics, long-term durability, and easy maintenance, exhibiting resistance against rusting.

**Concealed Cable Management**  
Quick-Detach Maintenance Door Design with Spacious Internal Cable Routing

**Under-Desk Storage Cabinet**  
Versatile Modular Components including CPU Holder, Printer Shelf, and Triple Drawer

Reception counter | Outpatient Hall

NAME	Reception counter
NO.	SMT-D-001

"Less is more" philosophy, minimalist white marble covers the entire counter, surrounded on all sides to enhance service efficiency and improve the patient's medical experience.

NAME	Reception counter
NO.	SMT-D-002

"An overall V-shaped visual design, symbolizing the hope of overcoming illness soon. From a bird's-eye view, it resembles the posture of wings in flight."

NAME	Reception counter
NO.	SMT-D-003

"Diagonally cut marble countertop, featuring DNA helix elements and a visually pleasing golden curve; the top's asymmetric design breaks away from monotony."

# Storage and Organization

## "Safe and Clear Storage Planning"

## Treatment Preparation Room

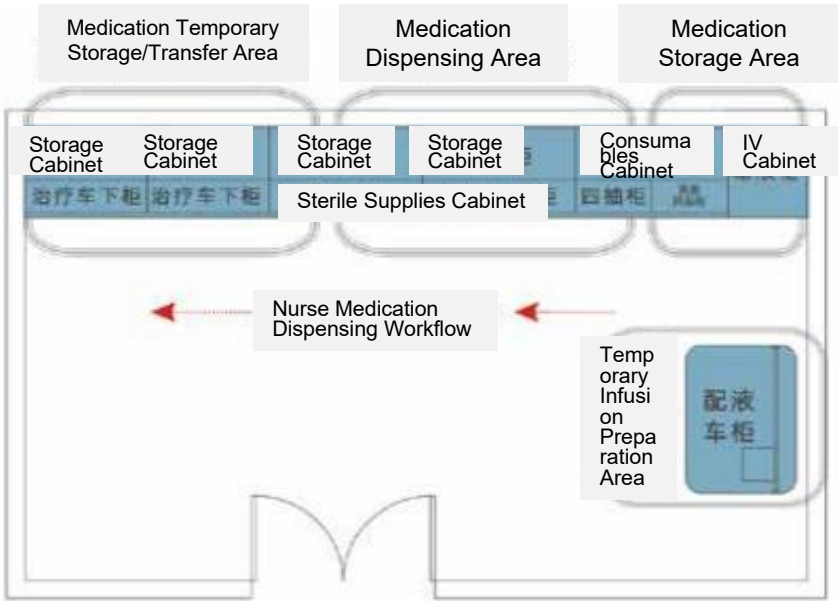

"The treatment preparation room is an area where healthcare personnel prepare for treatments before administering them to patients. It is primarily used to store medications, prepare medication solutions, and store sterile pharmaceuticals. Different spaces may have varying planning and layouts."

"—" Type Spatial Layout Planning  
Compared to compact space planning, a single-row layout planning aligns with the operational workflow. It offers a straightforward and flexible modular combination approach that not only saves space but also facilitates quick access to the required medications and items for the nursing staff.

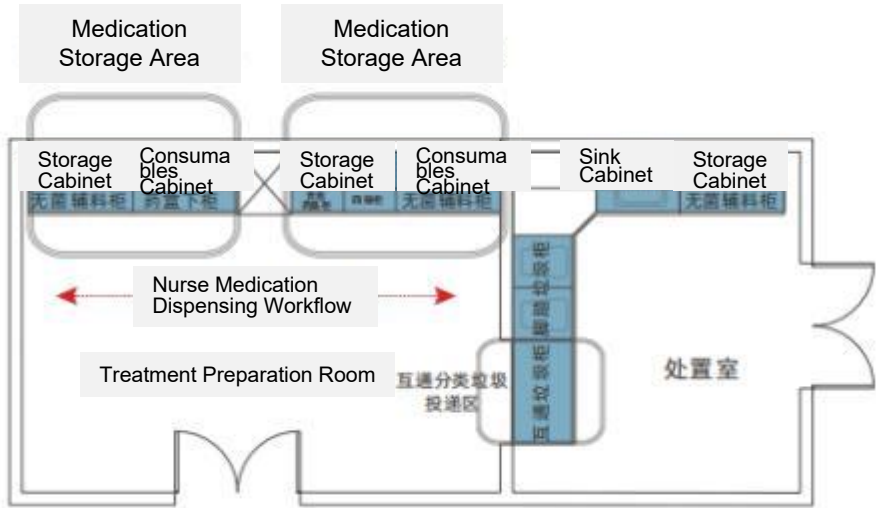

**Compact Type: Straight-line Spatial Layout**

The treatment room, as a nurse-dedicated space with high-frequency use, requires close attention to nurse habits and convenience needs. In addition to the conventional infusion counter, an independent infusion cart can also support the entire infusion process. In a relatively compact space, it meets the flexible infusion needs at multiple points, reducing interference from multiple personnel during infusion. This creates a treatment preparation space that prioritizes 'efficiency,' 'convenience,' and 'safety.'

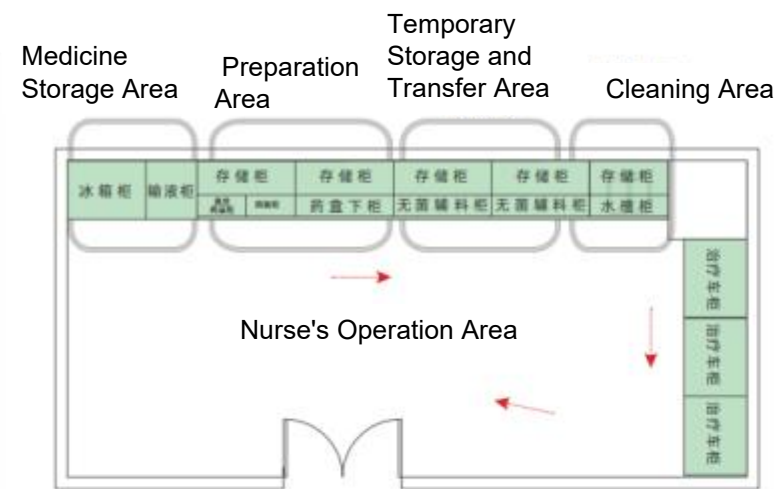

**Interconnected. Linear Spatial Layout**

The overall layout planning of the treatment preparation room should meet the requirements of clean and contaminated zones. The disposal room is adjacent to the treatment room, with interconnected waste bins placed between them. This facilitates nurses in the treatment room to segregate and dispose of medical waste, while the disposal room handles recycling. Through a well-thought-out layout, the probability of cross-infection within the hospital is reduced, thus meeting infection control requirements.

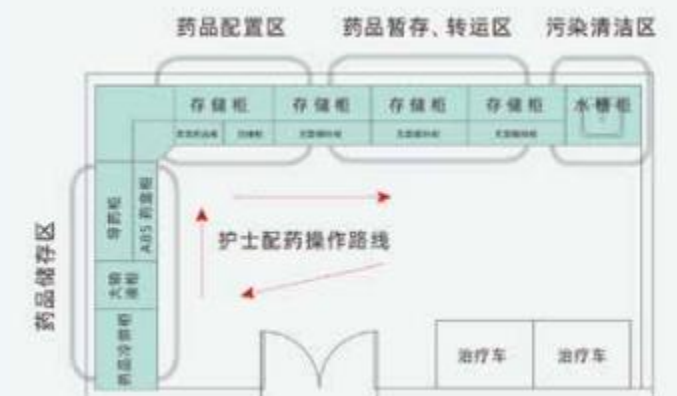

### Open Layout. Linear Space Arrangement

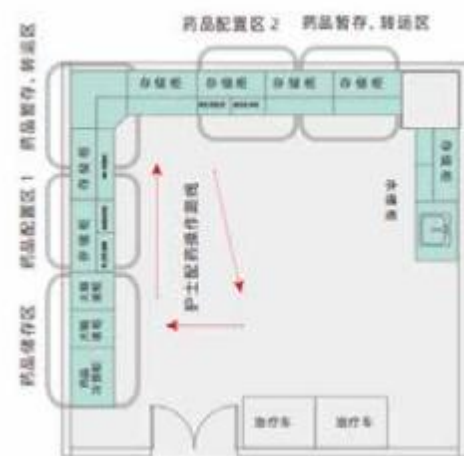

Treatment preparation rooms need to make full use of space for rational storage. Categorize and store items such as medications and medical supplies separately. Disposable and non-disposable items should be stored separately. Sterile and non-sterile items should also be separated. Different placement positions can be arranged according to the frequency of item usage. Labeling should be set up for the convenience of nurses.

### L-shaped Layout

For spacious areas, the L-shaped layout allows for more efficient utilization of space, aligning with a three-point linear workflow plan, minimizing nurses' movement, and reducing workload. The cabinet surface adopts electrostatic spraying technology with an antibacterial powder coating, providing features such as antibacterial, corrosion resistance, acid and alkali resistance, and wear resistance. The overall design eliminates handles, preventing hygiene blind spots, ensuring easy cleaning, and enhancing durability. Equipped with high-quality sensor faucets, touch-free for easy cleaning and infection prevention in one step.

### U-shaped Layout Planning:

The U-shaped layout planning aligns with operational workflows, catering to the daily work patterns of medical staff. It can meet the requirement of multiple simultaneous intravenous fluid preparations for nurses without adding repetitive workflow. An independent cleaning area ensures a sterile and clean intravenous fluid preparation environment.

## medication room

The medication room is generally located near the treatment area. The spatial layout is rigorous, distinguishing between clean, semi-contaminated, and contaminated zones. It is an integral part of daily surgical treatment, primarily handling tasks such as wound cleaning, medication changes, item and drug placement, clear labeling, and strict adherence to aseptic procedures.

Detachable bottom panel

品质静音铰链  
Premium silent hinge

# Disposal Room

The disposal room is a dedicated space for handling bodily fluids, blood, secretions, and drainage from patients of various conditions. Proper waste categorization in the disposal room is of utmost importance. Household waste, medical waste (infectious and non-infectious), and recyclables must be stored separately for easy identification. The disposal area should be equipped with sterilization cabinets, sinks, sensor-based trash bins, and other facilities to enable on-site, rapid, and thorough elimination of sources of contamination, significantly reducing the risk of infection transmission.

不锈钢水槽 无菌院感选材

Stainless sink - sterile hospitalization

感应式垃圾桶 无接触式投放

Garbage bin with sensor - contactless throwing

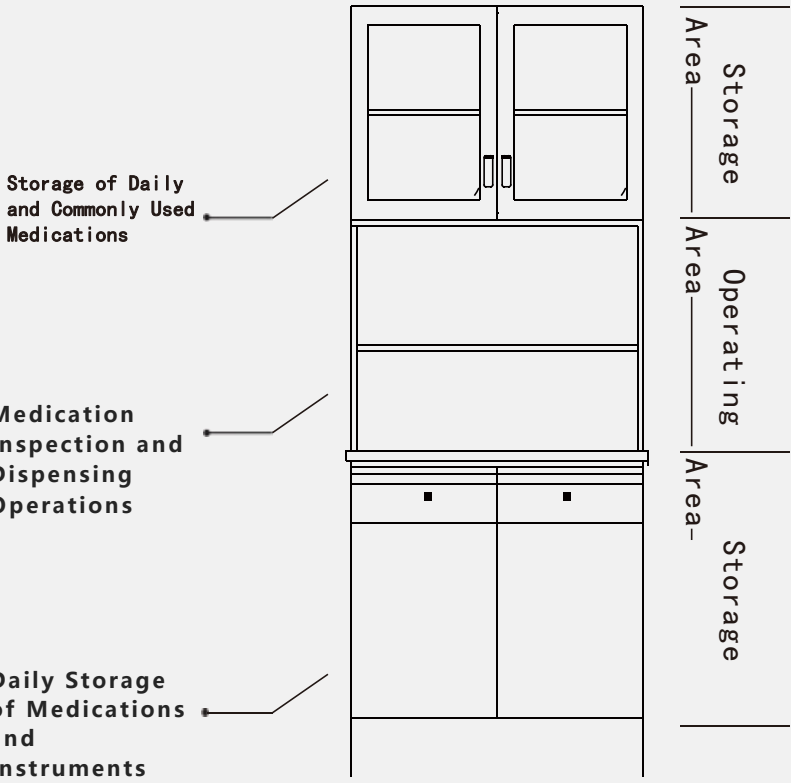

脚踏式垃圾桶 避免二次污染

Pedaled garbage bin - prevent secondary contamination

NO.	SMT-W-003
SIZE	900mm*860mm*430mm

The "Waste Handling Cabinet" is primarily used for the sorting and storage of medical waste. It is suitable for shared walls between treatment rooms and disposal rooms. It is used in conjunction with the back frame cabinet in the treatment preparation room.

In the treatment preparation room's liquid distribution area, there is a foot-operated design for convenient waste disposal during the liquid distribution process, helping to prevent cross-contamination. The stainless steel pedal design makes it easy to clean and resistant to rust.

Both sides can flexibly handle waste sorting, and the disposal room can handle recyclable and transferable waste.

PLAN C

## Dressing Room

Starting from the users' needs, the dressing room space includes various specifications and forms such as wardrobes, shoe cabinets, and shoe changing benches.

It also features thoughtful items like clothes hanging rods and full-length mirrors, creating a neat and orderly dressing space. With a full range of storage products, it provides a one-stop solution for diverse spaces such as medical facilities and offices.

## Wardrobe – Various Configuration Options

The wardrobe can be freely selected and matched according to the size of the dressing room and the arrangement of personnel, ensuring the right fit to meet specific needs.

As the primary users of hospital work areas, the needs of medical staff should be respected and fulfilled. A clean and minimalist design for the dressing room provides medical personnel with an efficient, focused, and orderly changing environment.

# | Wardrobe Product Details |

## Secure Locking Mechanism

The wardrobe features specialized locking mechanisms, ensuring high security as the locks are not interchangeable, enhancing the safety aspect.

## Aluminum Alloy Handle

The aluminum alloy handles are designed to be smooth and delicate, offering a high level of aesthetic appeal. They are corrosion-resistant, easy to clean, and crafted to prevent scratching the hands.

## Adjustable Shelves

The cabinet's movable shelves can be adjusted in height according to the items stored, offering high flexibility.

## Exceptionally Strong Load Capacity

The testing of the individual shelves demonstrates their exceptional load-bearing capacity, ensuring safe storage. The shelves are sturdy and durable, contributing to a long lifespan of the cabinet.

# | Shoe Cabinet, Shoe Changing Cabinet |

The selection of shoe cabinets and shoe changing cabinets can be customized based on the size of the dressing room and the arrangement of personnel, ensuring they meet specific requirements and needs.

As the main users of the hospital work area, the needs of medical personnel should be respected and met. A clean and simple dressing room design provides medical staff with an efficient, focused, and orderly environment for changing.

## Shoe Cabinet

The cabinet is highly efficient in its use, featuring 15 compartments to accommodate up to 15 users simultaneously.

The doors are designed for convenience, equipped with a magnetic suction feature that makes opening and closing the cabinet doors easy and effortless.

## Shoe Changing Cabinet

The cushion design is innovative, featuring an R25 arc shape that creates a more natural and fluid visual effect.

The bench offers a variety of combination forms, such as U-shape, straight line, L-shape, Z-shape, and others, providing flexibility in layout and design to suit different spaces and preferences.

The bench is designed for easy maintenance and hygiene: it features a faux leather-covered seat that is antibacterial and easy to clean, meeting the requirements for a hygienic environment in medical settings.

The design incorporates divided storage, offering organized space. The varying heights of compartments cater to different shoe types, facilitating orderly temporary storage.
